Description

Assignment Submission & Scoring

Assignment Submission

For this assignment, you submit answers by question parts. The number of submissions remaining for each question part only changes if you submit or change the answer.

Assignment Scoring

Your last submission is used for your score.

The due date for this assignment has passed.

Your work can be viewed below, but no changes can be made.

Important! Before you view the answer key, decide whether or not you plan to request an extension. Your Instructor may not grant you an extension if you have viewed the answer key. Automatic extensions are not granted if you have viewed the answer key.

1. 2/2 points | Previous Answers | SCALCET8 14.1.003. | My Notes | Ask Your Teacher

A manufacturer has modeled its yearly production function P (the monetary value of its entire production in millions of dollars) as a Cobb-Douglas function

$$P(L, K) = 1.47L^{0.65}K^{0.35}$$

where L is the number of labor hours (in thousands) and K is the invested capital (in millions of dollars). Find $P(125, 45)$ and interpret it. (Round your answers to one decimal place.)

$P(125, 45) =$ 128.5 ✓, so when the manufacturer invests $45 ✓ million in capital and 125 ✓ thousand hours of labor are completed yearly, the monetary value of the production is about $128.5 ✓ million.

Let $g(x, y) = \cos(x + 5y)$.

(a) Evaluate $g(5, -1)$.

$g(5, -1) =$ 1 ✓

(b) Find the domain of g.

- $-5 \le x \le 5, -1 \le y \le 1$
- $\mathbb{R}^2$ ✓
- $-\frac{\pi}{2} \le x + 5y \le \frac{\pi}{2}$
- $-1 \le x + 5y \le 1$
- $-1 \le x \le 1, -\frac{1}{5} \le y \le \frac{1}{5}$

(c) Find the range of g. (Enter your answer using interval notation.)

(No Response)

This question has several parts that must be completed sequentially. If you skip a part of the question, you will not receive any points for the skipped part, and you will not be able to come back to the skipped part.

Tutorial Exercise

Find and sketch the domain of the function.

$$f(x, y) = \frac{\sqrt{y - x^2}}{16 - x^2}$$

Step 1

When finding the domain of a function, we must rule out points where the denominator [equals zero] ✓ and where there are [negative] ✓ values in the square root.

Step 2

For $f(x, y) = \frac{\sqrt{y - x^2}}{16 - x^2}$, the denominator equals 0 when x^2 = [16] ✓.

Therefore, we must have x [≠] ✓ [±4] ✓.

Step 3

The numerator $\sqrt{y - x^2}$ is defined only when $y - x^2$ [≥] ✓ 0.

Therefore, we must have y [≥] ✓

$$x2

✓.

Step 4

Combining the above, we determine that the domain of the given function is as follows.

y [≥] ✓.

$$x2

✓ ∩ x [(No Response)] [±4] ✓.

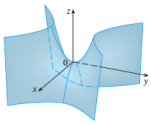

Figure 1

Video Example

EXAMPLE 5 Sketch the surface $z = 5y^2 - 6x^2$.

SOLUTION The traces in the vertical planes $x = k$ are the parabolas $z =$ (No Response), which open upward. The traces in $y = k$ are the parabolas $z =$ (No Response), which open downward. The horizontal traces are (No Response) $= k$, a family of hyperbolas. We draw the family of traces in Figure 2, and we show how the traces appear when placed in their correct planes in Figure 3. In Figure 1 we fit together the terms to form the surface $z = 5y^2 - 6x^2$, a **hyperbolic paraboloid**. Notice that the shape of the surface near the origin resembles that of a saddle. This surface will be investigated further in a later section when we discuss saddle points.

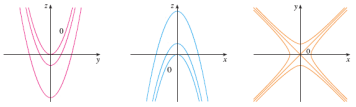

Figure 2

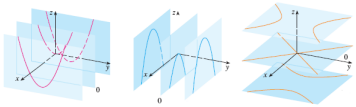

Figure 3

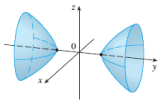
Need Help? Talk to a Tutor

41. 0.32/1.5 points Previous Answers SCALCET8 12.6.AE.007. My Notes Ask Your Teacher



Video Example

EXAMPLE 7 Identify and sketch the surface $4x^2 - y^2 + 2z^2 + 4 = 0$.

SOLUTION Dividing by -4, we first put the equation into standard form:

$$-x^2 + \frac{y^2}{4} - \frac{z^2}{2} = 1.$$

Comparing this equation with equations of quadratic surfaces, we see that it represents a (No Response), the only difference being that in this case the axis of the hyperboloid is the (No Response). The traces in the xy and yz-planes are the hyperbolas

$$-x^2 + \frac{y^2}{\text{(No Response)}} = 1 \quad z = 0$$

and

$$\frac{y^2}{\text{(No Response)}} - \frac{z^2}{2} = 1 \quad x = 0.$$

The surface has no trace in the xz-plane, but traces in the vertical planes $y = k$ for $|k| > 2$ are the ellipses

$$x^2 + \frac{z^2}{2} = \text{(No Response)} - 1 \quad y = k$$

which can be written as

$$\frac{x^2}{\text{(No Response)} - 1} + \frac{z^2}{2\left(\text{(No Response)} - 1\right)} = 1 \quad y = k.$$

Thus the traces are used to make the sketch in the figure.
