1. Tennis ball tarif

- The tennis balls sold tend to have a lot a elasticity.
- Head was the last of the tennis ball manufacturer to move abroad.
- Trump imposes tariffs from abroad.
- The 25 % tarif will be passed to consumers.
- This will affect almost 15 % of the US work force.
- Making balls is a specialized process, they need at least 3 years to move back home.
- China has bad bussiness practices.
- Head expects to loose a lot of money; Wilson's parent company is owned by a chinese person so it will likley be the case that they will stop shiping to the US.

2. Tim Hartford

- The DCA found that women's products tend to be more expensive, 6 % across 800 products.
- While the DCA could have cherry picked the products could make this study biased.
- It does seem to appear that women do pay more.
- Gender based markups.
- This study can be decieving, womens product in demand is not equivalent to the demand of products of men.
- Some nightclubs tend to charge men more than women.
- They found that women tend to be more inelastic? If this exists, then women can be more demanding of quality or other qualities en these products, while men are just looking for something cheap.
- This doesn't make it alright to charge more to women.
