2.	Ejercicio en clase #01	7

## Parte I Hojas de trabajo

## Capítulo1

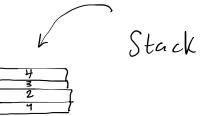

Hoja de trabajo #01

## Estructura de datos: #1

2020 - 01 -20 Pavid Corzo 20190432

#### operations:

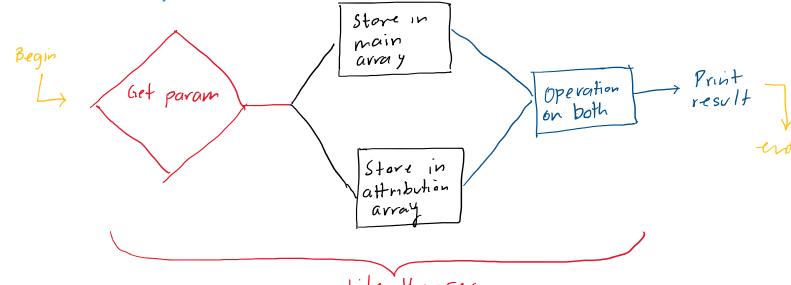

- 1) push
- 2) pop { options
- 3) clear

### dteps:

- 1) initialize an array of strings
- 2) the parameter will be pased via an Javascript alert-lika - user input browser interfase.
- 3) Store user input in the array - have a separate array to store the actions

  - link the indexes of both arrays
  - IF something hapens in one array it must napper in the other thres counting the "Last atribution"

while the user wants to perform sperations.

# Parte II Ejercicios en clase

## Capítulo2

Ejercicio en clase #01

#### Strings:

- 1. Strings are "arrays of characters". \*\*\*
- 2. Every string is terminated with a "null byte \0" \*\*\*
- 3. If a string is given as "AB CD", THE LENGTH IS "5". \*\*\*
- 4. Char mesg[100]; can store a maximum "100" of characters. \*\*\*
- 5. S1>S2 means "it evaluates the lengths of the strings and returns true if S1 is bigger than S2". \*\*\*
